I write and direct short films, and I build the technical side of them myself. My background is production software engineering, which means AI video, generative VFX and previs are working tools for me rather than demos — I shoot live-action and composite generated elements into it, and I can write the systems behind the workflow as easily as I can use them. **Looking to contribute on real productions and on the engineering that supports them.**

FILM

Ketchup — horror-comedy short

Writer · Director · Cinematography · Editor

Independent short written, shot and cut solo. Practical, no-budget production — the whole pipeline from script to delivery run single-handed. youtube.com/watch?v=grgffM9v0jU

Ctrl V — IFP 50-Hour Filmmaking Challenge, 2026

Writer · Actor

Written, shot and completed inside the 50-hour window of the challenge. [Watch →](#)

Generative shorts — short-form, Instagram

Concept · Generation · Edit

Horror and narrative short-form built in Google Flow — hybrid pieces that composite generated figures into my own phone-shot night exteriors, plus a fully generated animated piece. [Reel II — 2.5k views](#) · [Reel I](#) · [Animation](#)

AI × FILM — WHAT I ACTUALLY DO WITH IT

GENERATION	Google Flow, Veo, Runway, Omni — text-to-video, image-to-video, video restyling. Working knowledge of where each model breaks: faces, hands, continuity across cuts.
HYBRID VFX	Compositing generated elements into live-action plates; environment work and set extension; match-cutting a practical timeline against a generated one.
CONSISTENCY	Character and look consistency across a sequence — prompt architecture, shot-by-shot generation order, canary-testing the cheapest clip before spending credits on the expensive one.
POST	Premiere Pro, CapCut, Descript — edit, sound and final delivery.

ENGINEERING

Attentive AI — Software Engineer, Backend

Sept 2025 – present

- Own a module of a production estimation platform end to end — backend services, frontend integration, and the contract governing how the platform and its AI service exchange data.
- Rebuilt that module onto a spec-driven pipeline and ran the migration in production, including the incident response when legacy data broke on release.
- Write the API and spec documentation the AI and automation teams build against.

STACK Python · backend services & REST APIs · event-driven pipelines (Pub/Sub) · LLM and AI-service integration · Git

CURRENTLY

BUILDING	<i>The Monkey's Paw</i> — a cinematic AI-generated retelling; a long-form test of whether character and tone can hold across a full sequence.
STUDYING	Script-to-screen analysis of horror and psychological cinema — reading the screenplay against the cut, and tracking how sound, ambience and blocking carry a scene.

EDUCATION

Indian Institute of Technology Bombay — B.Tech, Computer Science

2021 – 2025
